Let's continue....we're doing the tributaries today, and flows should be back down by tomorrow.

Okay?

We are above 500 cfs - thoughts?

>>> Stephanie Vaughn <Vaughn.Stephanie@epamail.epa.gov> 8/28/2012 8:37 AM >>>  
Please continue, as currently planned, and continue to monitor the situation.

Thanks

We popped above 400 cfs this morning... let us know how we should proceed.

>>> "Durocher, Kristen" <kristen.durocher@aecom.com> 8/28/2012 7:50 AM >>>

Bill and Rob,

A fast moving storm went through the area this morning. It is gone and the Saddle River is already receding, and it appears Little Falls is dropping as well. Little Falls received approximately ½" of rain:  
[http://waterdata.usgs.gov/nj/nwis/uv/?site\\_no=405219074132001&PARAMeter\\_cd=00045,00021,00052,00025,00035,61728,00036](http://waterdata.usgs.gov/nj/nwis/uv/?site_no=405219074132001&PARAMeter_cd=00045,00021,00052,00025,00035,61728,00036)

Note that at Dundee Dam, flows have gone above 400 cfs. They are currently (time of 07:15) at 407 cfs. I will continue to monitor the flows to see where they crest.  
[http://waterdata.usgs.gov/nj/nwis/uv/?site\\_no=01389890](http://waterdata.usgs.gov/nj/nwis/uv/?site_no=01389890)

We should inform EPA, but unless they get higher than 500 cfs or more, I don't see why we would cancel.
